## Lead Control Systems Engineer

### Description

**Do you want to revolutionise the medical sector with the use of Lasers and Robotics?**

Are you a passionate Control Systems Engineer looking to develop your technical skillset whilst you progress through an industry leading business?

Does the opportunity to self-develop and progress within a dynamic and innovative company focused on creating solutions that helps save lives appeal?

Based on the outskirts of vibrant Cardiff, our team is at the cutting edge of laser & robot technology. Our expertise enables the world's leading medical device manufacturers to automate their production to enable their life changing devices to impact ever more people.

With rolling hills and thriving cities right on our doorstep, we encourage a work life balance where our team are proud to work and live in beautiful South Wales, where adventure, culture and community are in affordable abundance.

This is a rare and excellent opportunity to join our highly innovative organisation undertaking life-saving partnerships with billion-dollar companies and technologically rich Customers. We create a culture where technical growth, new ideas and the advancement of possibilities are encouraged.

We offer a 'people' centric environment, focused on unlocking the growth of our close team in a fun, fair, and flexible way. We empower our team with the autonomy to have a significant impact and reach for the stars, allowing all to challenge the status quo as we strive for technical and brand excellence.

### Responsibilities

You will be responsible for executing the internal or external project development life cycle at Laser Wire Solutions to meet customer, machinery and quality standards. The role will also have an active part in continuous improvement of products and procedures. You will be responsible for creating technical specifications, hardware & software design and implementation through to commissioning the final machine before it is shipped to the end user. There may also be duties pertaining to remote and site support as escalation for the company Service Team.

### THE ROLE:

- Execute full control software development life cycle for machine products to meet customer and quality standards.
- Provide recommendations for continuous improvement of product and procedure.
- Create technical specifications and documentation in line with company quality and procedures for internal and customer use.
- Perform root cause analysis for any issues and implement Corrective and
